WORK EXPERIENCE

Transportation & Collaborative Consumption *September 2011 - Current* Getaround, San Francisco
Backend Software Engineer responsible for the majority of the implementation and logic behind car rentals, payments and SMS notifications. System was built on Google App Engine using Python 2.7. Datastore/memcached for persistence. Employee #19.

Consumer Health & Wellness *May 2011 - August 2011* Wakemate, San Francisco
Sole backend developer of the Wakelytics analytics platform and the Wakestore in-house e-commerce platform. Wrote and managed the API used by the mobile applications to retrieve and upload sleep data. Managed the storing and architecture of user sleep data. Implemented UI modifications. Work was in Python/Django with a PostgreSQL/memcached backend and JQuery/JS/Compass UI tools.

Accounting & CRM *May 2010 - May 2011* Backstop Solutions Group, Chicago
Enterprise Java development on BSGs main Accounting/CRM platform, as well as original development on scalable services to sync email from Exchange 2007/2010 servers. Following an Agile (Scrum) development model with a two week development iteration. Technologies used include Thrift, Hibernate, Struts and Stripes. Testing tools include FitNesse, JUnit and Squish.

PERSONAL PROJECTS

Social Networking & Context Awareness *2010* After Credits, Foursquare
Designed, implemented and deployed a foursquare [app](#) to notify a user if there was a scene after the credits of a movie they were checked in to. Featured on the Foursquare Engineering [blog](#), [aboutfoursquare.com](#) and the Foursquare [App Gallery](#). Written in Clojure, Redis/memcached persistence, deployed on Heroku. Over 9 thousand users.
